**Infectious Disease, Life cycle
management, Women's Health**

Time with
Lifescience Dynamics:

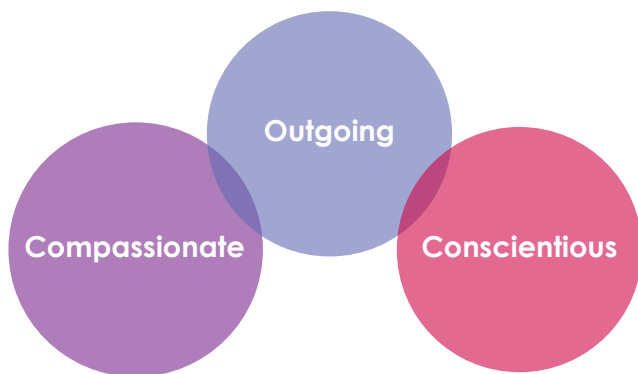

3 year, 2 months

Current role:

Consultant

What three words best describe you?

CAREER PROGRESSION

What's one thing we don't know about you?

In my personal life I am very much a jack of all trades, master of none. I love trying new sports, activities and hobbies. Some I stick to longer than others such as scuba diving, skiing and cooking. Others I try just to see what it's like. Recently, I have tried different types of pottery including "throwing", got into reformer Pilates as well as learning white water Kayaking! I'm always looking for new experiences and adventures.

What is your career high to date?

A career high for me was planning and leading a workshop on KIQs and KITs at PharmaCI Munich 2024. Starting from scratch, we developed engaging exercises, activities, and materials to make KIQs practical and interactive. With the support of fantastic colleagues, we fine-tuned the workshop through a dry run, gathering valuable feedback. Delivering the workshop was very rewarding, and the energy in the room made it an incredibly fun experience. Ultimately, what made this a career high was when we got direct feedback from the attendees who stated how much they learnt as well as enjoyed the workshop!

Why have you joined Lifescience Dynamics?

While I enjoyed my time as an academic researcher, I realised it wasn't my long-term path. This led me to explore other careers in the life sciences. Coincidentally, in my first PhD year, I met a now-senior company member at a careers fair, where they spoke highly of the organization. What drew me in was:

1. **Diverse exposure** – The opportunity to work across various therapeutic areas, diseases, and drugs, keeping my work dynamic and intellectually stimulating.
2. **Being at the forefront of drug development** – Staying ahead of cutting-edge advancements and contributing to therapies that could soon transform patients' lives.
3. **A welcoming company culture** – From my first interaction at the careers fair to the interviews, I was struck by the warmth, professionalism, and passion of everyone I met, reinforcing my confidence that this was the right place for me.

What are the top three things you enjoy about being a member of the Lifescience Dynamics family?

1. The single most important thing is the incredible people you'll work with—compassionate, supportive, and genuinely amazing individuals.
2. Numerous opportunities to learn, grow, and advance in your career as you progress.
3. The exciting midyear planning retreat to the legendary Christmas parties, the social events bring everyone together.

What are you looking forward to in your next step with Lifescience Dynamics?

As a consultant, my role now centres on client engagement and business development. I'm excited to keep honing my skills in these areas, embracing new opportunities, and stepping into challenging situations that push me to grow both personally and professionally!

What would your advice be to someone considering joining the Company?

Be prepared to learn new things about areas of drug development, pharma and diseases you have never heard about before. If you can show a passion for this you can't go wrong!
